Contents of Volume 63

NUMBER 1, JUNE 1986

P. D. YANKULOV, G. STAIKOV, A. YANAKIEV, R. KVACHKOV, P. V. ANGELOV, AND E. BUDEVSKI. Study of the Interaction of β''-Alumina Ceramic with Sodium at Elevated Temperature 1

P. D. BATTLE, C. R. A. CATLOW, J. W. HEAP, AND L. M. MORONEY. Structural and Dynamical Studies of δ-Bi_2O_3 Oxide Ion Conductors. I. The Structure of $(Bi_2O_3)_{1-x}(Y_2O_3)_x$ as a Function of x and Temperature 8

M. VITHAL AND R. JAGANNATHAN. Mössbauer Studies of $Fe_{1-x}M_xBO_3$ ($x = 0, 0.1$; $M = Al^{3+}, Ga^{3+}, Cr^{3+}$) close to the T_c 16

T. SIEGRIST AND F. HULLIGER. High-Temperature Behavior of $CoAs_2$ and $CoSb_2$ 23

M. VLASSE, G. A. SLACK, M. GARBAUSKAS, J. S. KASPER, AND J. C. VIALA. The Crystal Structure of SiB_6 31

VERA DONDUR AND RADOVAN DIMITRIJEVIĆ. The Thermal Transformation of Na LiA Zeolites. A New Polymorph in the System Li_2O–Al_2O_3–SiO_2 46

D. MASCHERPA-CORRAL, B. DUCOURANT, R. FOURCADE, G. MASCHERPA, ET S. ALBEROLA. Interaction trifluorure d'antimoine–seleniates alcalins: Structure cristalline de $K_2SeO_4(SbF_3)_2 \cdot H_2O$ 52

O. PEÑA, R. HORYN, C. GEANTET, P. GOUGEON, J. PADIOU, AND M. SERGENT. Crystal Structure and Physical Properties of $EuMo_6S_8$ Single Crystals at Ambient Pressure 62

HORNG-YIH CHEN AND ARTHUR W. SLEIGHT. Crystal Structure of $Bi_2Mo_2O_9$: A Selective Oxidation Catalyst 70

M. CRIADO-SANCHO AND C. MINOT. An Extended Hückel Tight-Binding Calculation of the Cadmium Structure 76

Y. PIFFARD, S. OYETOLA, A. VERBAERE, AND M. TOURNOUX. Synthesis, Thermal Stability, and Crystal Structure of Antimony(V) Phosphate $SbOPO_4$ 81

P. A. M. BERDOWSKI AND G. BLASSE. The Critical Concentration for Quenching of the Eu^{3+} Luminescence in Some GD^{3+} : Eu^{3+} Systems 86

M. QUEIGNEC, M. EVAIN, R. BREC, AND C. SOURISSEAU. Vibrational Study of Some Low-Dimensional Niobium–Phosphorus–Sulfide Compounds, P_2NbS_8, PNb_2S_{10}, and $P_2Nb_4S_{21}$ 89

MIGUEL QUINTERO, LAURA DIERKER, AND JOHN C. WOOLLEY. Crystallography and Optical Energy Gap Values for $Cd_{2x}(Culn)_yMn_{2z}Te_2$ Alloys 110

THOMAS J. PINNAVAIA, IVY D. JOHNSON, AND MAX LIPSICAS. A ^{29}Si MAS NMR Study of Tetrahedral Site Distributions in the Layered Silicic Acid H^+-Magadiite ($H_2Si_{14}O_{29} \cdot nH_2O$) and in Na^+-Magadiite ($Na_2Si_{14}O_{29} \cdot nH_2O$) 118

BRIEF COMMUNICATION

S. E. KESSON AND T. J. WHITE. Radius Ratio Tolerance Factors and the Stability of Hollandites 122

ANNOUNCEMENTS 126

J. J. COOPER AND R. J. D. TILLEY. New Oxyborates in the Mg–Mn–B–O System 129
R. A. MOHAN RAM, L. GANAPATHI, P. GANGULY, AND C. N. R. RAO. Evolution of Three-Dimensional Character across the $La_{n+1}Ni_nO_{3n+1}$ Homologous Series with Increase in n 139
G. BLASSE, G. J. DIRKSEN, E. W. J. L. OOMEN, AND M. TRÖMEL. Luminescence of Tellurite Anti-glass Phases 148

Announcement 461

Author Index for Volume 63 462

The Subject Index for Volume 63 will appear in the December 1986 issue as part of a cumulative index for the year 1986.

Information for Authors

The *Journal of Solid State Chemistry* is a research journal devoted to the chemical, structural, thermodynamic, electronic, magnetic, and optical properties and processes of solids. Theoretical and experimental contributions are both welcome. Critical reviews are occasionally presented in selected rapidly developing fields.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Solid State Chemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscripts may be presented as articles (i.e., conventional full-length expositions) or notes (brief rapid communications of important new work). Notes are limited to 1200 words and are given accelerated review and publication. English, French, and German are the official languages of the Journal but submission of articles in English is encouraged. Manuscripts should be submitted to *Journal of Solid State Chemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101.

Manuscripts should be submitted in quadruplicate—double-spaced on one side of 21.5 × 28 cm paper. Headings of major sections should be typed in capital letters and centered on the page. Each page of the manuscript should be numbered. Page one should consist of the manuscript title, the author's name, and the author's affiliation. For multiple authors, the author to whom correspondence is to be addressed should be indicated. Page two should consist of an abstract (50–150 words) suitable for use in *Chemical Abstracts*. The American Chemical Society's *Handbook for Authors* or the *Style Manual* of the American Institute of Physics should be followed regarding matters of style and abbreviation.

Tables. Tables should be numbered with Roman numerals in a sequence corresponding to the order of citation in the text. Footnotes to tables are to be placed directly below the table and should be indicated by superscript, lowercase italic letters (^{a,b,c}). Tables longer than two manuscript pages should be submitted as clear, sharp glossy photographs. They will be reproduced by photoreproduction and should be designed to fit the Journal page after 50% reduction in each dimension. Errors in such tables cannot be corrected in proof.

Auxiliary Material. In lieu of publication, unusually long tables and sequences of repetitive figures must be deposited with the National Auxiliary Publications Service (NAPS). In particular, structure factor tables must be deposited if, in a clear, proportional, photoreduced format, they would occupy more than one Journal page (this corresponds to a limit of about 1000 F_o and F_c).

For material to be deposited, a deposit fee of $25.00 for up to 98 pages of standard-size or 49 pages of oversize deposited material is to be paid by the authors to NAPS. Appropriate transmittal forms to accompany the deposited material are supplied to the authors by the Editor at the time a paper is accepted for publication. The following footnote (wherein missing numbers are to be inserted by the author in page proof) should be used to reference deposited material.

See NAPS document No. ____ for ____ pages of supplementary material. Order from ASIS/NAPS. Microfiche Publications, P.O. Box 3513, Grand Central Station, New York, NY 10163. Remit in advance $4.00 for microfiche copy or for photocopy, $7.75 up to 20 pages plus $.30 for each additional page. All orders must be prepaid. Institutions and Organizations may order by purchase order. However, there is a billing and handling charge for this service of $15. Foreign orders add $4.50 for postage and handling, for the first 20 pages, and $1.00 for additional 10 pages of material, $1.50 for postage of any microfiche orders.

Figures. Figures should be submitted as glossy prints or as original black ink drawings, no larger than 21.5 × 28 cm. Press type is not acceptable. It is important that lettering on drawings be done with a lettering set and be planned to fit the proportion of the printed page. Lettering on the original should be large enough to be legible after reduction of the figure to single-column width. The difference in type size within a figure should be no more than approximately 15%. The caption of each axis should be lettered parallel to its axis. Background grids should not be included. For halftone reproductions, glossy, high-contrast, black and white prints should be submitted. Illustrations in color can be accepted only if the authors defray the cost. Each figure should be identified on the back with the author's name and figure number. Figures are to be cited in the text by consecutive Arabic numerals. Figure captions should be typed as a list on a separate page.

Equations. Equations should be typewritten or clearly handwritten with an Arabic number if necessary for reference placed in parentheses to the right of equation. Reference to equations should use the form "Eq. (3)."

Footnotes. Footnotes to the text should be indicated by consecutive superscript numbers and listed on a separate page at the end of the paper.

References. References should be cited in the text by consecutive underlined numbers in parentheses. The references must appear on a separate sheet, listed in numerical order, i.e., in accordance with order of citation in the text. After the reference number, the author's initials, last name, journal name, volume, initial page number, and year (in parentheses) should be listed in that order. Abbreviations for journal names should follow the style of *Chemical Abstracts Service Source Index*, 1980. For book references, give the author's name, name of book (in quotes), Editor's name (if any), edition (if other than the first), chapter or page number, publisher's name, place and year of publication.

Proofs. Unfolioed page proofs will be sent directly to the author from the printer together with order forms for reprints. There is no page charge.

Academic Press College Division Gives You Solid Coverage

Solid State Physics

Gerald Burns

July 1985 Hardcover 800 pages

Just published, *Solid State Physics* offers an introductory perspective on the field of solid state phenomena. It is organized to demonstrate the interrelationships of the different types of solids. In addition, *Solid State Physics* provides a comprehensive, yet basic, examination of modern topics not typically well-treated in texts at this level, such as surface science, superlattices, and inversion layers. This class-tested material has been a proven success with both instructors and students.

Mathematical Methods For Physicists, Third Edition

George B. Arfken

Miami University, Oxford, Ohio

January 1985 Hardcover 1000 pages

This well-known author has made several changes in this new edition in order to increase the usefulness of the text in a rapidly changing world. Greater emphasis is placed on numerical analysis and computing, on modern notation for column vectors and row vectors. Extra attention is given to diagonalizations of matrices, eigenvectors, and eigen-values. Mathematics is presented as a tool for analysis, a language for describing the physical world.

Introduction to Modern Physics, Second Edition

John D. McGervey

Case Western Reserve University

1983 Hardcover 756 pages

This well-respected junior/senior level text develops quantum theory and its applications to solid state and nuclear physics. Major equations are discussed intuitively and physically, rather than in purely mathematical terms. The text includes a state-of-the-art treatment of elementary particles and fully worked example problems. The text is also suitable for a one-term course in quantum mechanics.

Quantum Chemistry

John P. Lowe

The Pennsylvania State University

1978 Softcover 599 pages

This introductory text features a detailed description of the basic principles, methods, and results of quantum chemistry. The author offers students a clear and concise presentation of those topics that are relevant to modern molecular orbital theory, and includes subjects of practical interest to those interested in organic, inorganic, and physical chemistry.

If you would like to examine any of these titles, please write to

Thank you.
